

## “Sciences Faculty Member”

**Dr. Evans, Ph.D.**

*University of Notre Dame  
Department of Chemistry*

### About Dr. Evans

Dr. Evans has been interested in chemistry since he was a young child. He has lived his entire life on the east coast but just relocated for his position at Notre Dame. He bought a house in downtown South Bend and moved with his wife, 4 year old daughter and two cats. In his free time he enjoys computer games and reading. Dr. Evans is computer-savvy but doesn't consider himself an expert user.

### Background

Dr. Evans is a Chemistry faculty member at the University of Notre Dame. He is currently collaborating with a Computer Science Professor on a project looking at counterfeit drug detection. This is Dr. Evan's first research project with collaborators from outside the institution - he is also working with faculty from Purdue and Northwestern, as well as the data/image collector in Kenya.

### Primary Use

Dr. Evans needs an institutional repository for sharing, data retention and facilitating complex data collaboration with other project members.

### Summary of goals

- Archive his images and datasets from research projects
- Allow restricted access to his materials to specific collaborators inside or outside ND
- Have other collaborators to contribute to his projects
- Storage for a large amount of images (200-900 for current project) in one location
- Link projects to other publications
